ROAD CASUALTY STATISTICS GREATER MANCHESTER 2007

DISTRICT TABULATIONS AND COMPARISONS

This report is one of two reports produced to accompany the Road Casualty Statistics Greater Manchester 2007 report (GMTU Report 1408). All commentary is included in the main report. This accompanying report is only available in electronic format.

This report presents tabulations and comparisons of road traffic accidents and casualties by district.

Section One provides information for each of the ten districts plus Greater Manchester as a whole, whilst Section Two provides comparisons between districts.

No commentary is provided in this accompanying report, but it is worth noting that the data shows that the trends in Killed and Seriously Injured (KSI) casualties vary considerably between the ten districts. In 2007 KSI casualties varied from 37% below the base years (the average of 1994 to 1998) in Bolton MBC compared to only 11% below in Bury MBC. In Greater Manchester as a whole, KSI casualties were 27% below the base.

The trends in child KSIs are encouraging and range from a 23% fall in Oldham MBC to 75% in Rochdale MBC. In Greater Manchester as a whole, child KSI casualties in 2007 were 54% below the base.
